Tips for Running LightSide on Mac

1. Install Java 1.8
   a. If you don't have the Homebrew package manager installed, install it as follows:
      i. Open a terminal window.
      ii. Enter the following command:
         /bin/bash -c "$(curl -fsSL https://raw.githubusercontent.com/Homebrew/install/master/install.sh)"
      iii. Follow the prompts.
   b. Install Java 1.8
      i. Open a terminal window
      ii. Enter the following command:
         brew cask install adoptopenjdk/openjdk/adoptopenjdk8
      iii. Follow any prompts.

2. Run Lightside:
   a. Open a terminal window.
   b. Navigate to the directory where LightSide was downloaded (or if you moved it, where it is installed) – the same directory that this document is in.
   c. Enter the following command: . LightSIDE.command
      i. (Note that you must include the period at the beginning of the command.)
